

THE SUFFRAGETTES

"Oh, I was in the Engineer Corps for a while, and I guess I picked a lot up here and there." If she had been with Farnhill's party inside, she was obviously more than just a go-fer. Why in hell did she come out to the parking lot to be nice to the troops? Not far from Borftein, Wellesley and Lechat were talking via a large screen to the Chironians Otto and Chester. Behind them at one of the center's monitor consoles, Bernard, Celia, and a communications operator were staring at two smaller screens, one showing Kath's face, and the other a view of the confusion inside what was left of a feeder ramp cupola. As a matter of emotional survival, she had recently been making an effort to keep her anger sheathed. "So what is it they've got?" Colman asked again. "Missiles wouldn't be any use to them, and they know it. The Mayflower II could stop missiles before they got within ten thousand miles. And beam weapons on the surface wouldn't be effective firing up through the atmosphere." He spread his hands imploringly. "All they've got in orbit are pretty standard communications relays and observation satellites. The moons are both out of range of beam projectors. So what else is there?" "She's on the payroll of your husband's charitable foundation." "Good grief, didn't you go to school?" The blood was worse. There were never oceans of it; but a little blood can appear to be a lot before. "Well, give us a call when you do, and we'll fix something up. I live in Franklin, so there shouldn't be too much of a problem. That's where we usually get together." "I had to scrap one set." lay sighed. "I guess it's hack to square one on another. That's what I reckon I'll start today." mottled as a boiled lobster, he at last clears his throat of food only to fill it with laughter, making such a erating capacity for practically this whole area, and a great deal of materials via a variety of interdependent processes," Farnhill informed the meeting. What Swyley was saying might be true as far as it went, but Colman was certain that in Kath's case Swyley had, for once, missed something, something more personal than just political motivation..baseboard and rattling against the legs of the furniture?but also because she herself was grunting like a..with death. "Then there is no reason for us to allow unseemly haste to lower the quality of the evening," Sterm said, sitting forward and reaching with a leisurely movement of his hand for the decanter. "A little time ripens more than just fine cognac. Will you join me in a refill?" "Oh, okay," lay said. "Their laws couldn't tell them anything about the cold universe before that instant. Flame physics only came into existence when the flame did." .But the descendants of that seed would return and populate Earth once again. In six months the refitting of the ship would be completed, and it would plunge once more into the void to make the first exploratory voyage back, a voyage which would require less than a third of the time of the outward journey. Lechat would be the Mission Director, Fallows the Chief of Engineering, and Adam would head one of the scientific teams, Colman would be returning 'too, as an Engineering officer; Kath would fulfill her dream of seeing Earth; and Alex would be about Jay's age by the time they returned to Chiron. Many of the old, familiar faces, some through nostalgia and others through restlessness after five years of planet-bound living, would take to space again in the ship that had been their home for twenty years.. "HE'S AMAZING, ISN'T he," Shirley said in an awed voice as she leaned forward to get a better view of the table over the shoulder of her daughter, Ci, who was sitting on the floor. "It must be a genetic mutation that makes sticky fingers or something." .EVEN IN HIS short time at the university near Franklin, Jerry Pernak had learned that Chironian theoretical and experimental physics had departed significantly from the mainstream being pursued on Earth. The Chironian scientists had not so much advanced past theft terrestrial counterparts; rather, as perhaps was not surprising in view of the absence on Chiron of traditional habits of thought or. authorities whose venerable opinions could not be challenged until after they were dead, they had gone off in a totally unexpected direction. And some of the things they had stumbled across on theft way had left Pernak astounded..Another bite of pie. More joyless chewing. "I don't know." "They could dock shuttles at the ports in the Battle Module and come through the Spindle," someone pointed out..Sterm's -eyes took on a distant light, and his breathing quickened visibly. rattling teeth to teeth, knocking elbows against ribs. Pernak had a surprisingly long stride for his height, and Jay had to hurry to keep up as they walked a couple of blocks through densely packed but ingeniously secluded interlocking terraces of Maryland residential units. It wasn't long before Pernak was talking about phase-changes in the laws of physics and their manifestation through the process of evolution. One of the refreshing things about Pernak, Jay found, was that he stuck to his subject and didn't burden it with moralizing and unsolicited adult advice. He had never been able to make up his mind whether Pernak was secretly a skeptic about things like that or just believed in minding his own business, but he had never found a way of leading up to the question..protect him.. "What kind of outcome?" Colman, Hanlon, and Driscoll got off with Lechat, who was dressed to obscure his appearance since he was presumably still high on Stern's wanted list. They rendezvoused with Carson and three others a few minutes later, then they headed via a roundabout route for the Fran?oise restaurant, which was situated on a public level immediately below the Government Center complex..Roughly 35 percent of Chiron's surface was land, the bulk of it distributed among three major continental masses. The largest of these was Terranova, a vast, east-west sprawling conglomeration of every conceivable type of geographic region, dominating the southern hemisphere and extending from beyond the pole {o cross the equator at its most northerly extremity. Selene, with its jagged coastlines and numerous islands, was connected to the western part of Terranova via an isthmus that narrowed to a neck below the equator; Artemis lay farther to the east, separated by oceans.. On the nearest end of the makeshift.Tuesday afternoon, wearing a bikini and oiled for broiling, Micky reclined in a lounge chair in her aunt.Trying to regain control of his emotions, but still blubbering a little, he says, "I don't know why I offended."Quite. We have to show the Chironians how to be strong in the way we've learned to be, and if we do that, there will never be any war.. "Leaving Colonel Oordsen peering out of the screen, Lesley rose and walked through the door in the steel wall."All set, except for springing Borftein and Wellesley," Colman said. "Now that we've got Malloy, those two would make the whole thing cast-iron." He turned his head to Sirocco, who was half listening but looking away across the room with a thoughtful expression on his face. "Had any more thoughts about that?" Colman asked. Sirocco responded distantly, "Borftein and Wellesley..".Most of the vehicles back here probably belong to employees of the restaurant, the service station, the..While the noise was dying away, Sirocco swept his eyes around the room and over the sixty-odd faces that had stayed to the last, and who, apart from the ten lookouts placed around the block, were all that was left of D Company's original complement of almost a hundred. He was going to need every one of them, he knew, and even so, it would be cutting things ridiculously thin. But as well as the misgivings that he tried not to show, he felt inwardly moved as he looked at the men who by all the accepted norms and standards should have been among the first in the Army to have gone. But apart from the SD units, D Company's record was second to none. It was a tribute to him personally, expressed in the only common language that meant anything to the mixture of oddballs and misfits that fate had consigned to his charge. But Sirocco had always seen them not as misfits but as individuals, many of them talented in their own peculiar and in some eases bizarre ways, and had accepted them for what they were, which was all they had ever really wanted. But the term misfit was a relative one, he had come to realize. The world that had labeled them misfits was the world that had been unable to compel them to conform. Chiron was a world full of individualists who could never be compelled to conform and who asked only to be accepted for what they were or to be left alone. Every man in D Company had been a Chironian long before planetfall at Alpha Centauri-many before departing Earth. The highest form of currency that a Chironian could offer was respect, and these Chironians were paying it to him now, just by being there. Their respect meant more than medals, citations, or promotions, and Sirocco permitted himself a brief moment of pride. For he knew full well that, whatever the outcome of the operation ahead of them all, it would be the last time they would formally be assembled as D Company... Jean took the boots and turned them over in her hands. Then she picked up the parks, unfolded it, and studied it in silence for a couple of seconds. "But . . . these are good, Jay," she said. "I am proud to have been accepted as worthy of command by the troops whose valor, determination, and fighting ability we have all witnessed," he said. "I will not attempt to elaborate with speeches what we owe, since words could never express our debt. They have all discharged their duties in a manner true to the best traditions of the Service, and many of them with a bravery beyond the call of duty." He paused, and his face became more solemn. "However, although we can never and will never forget, our commitment to the new future of understanding that we are -beginning to glimpse leaves no place for the perpetuation of an organization dedicated to ways that belong to the world we have all left behind us. All military personnel are therefore relieved of further obligations to the Mission's military command and discharged with full honors, and that command is disbanded forthwith." The hall remained quiet while Borftein sat down. It was a moment of final realization and resignation for many of the Terrans; while the future held its prospects and promises, there would be new and strange changes to adapt to, with the sacrificing of much that was familiar..
